CONTENTS

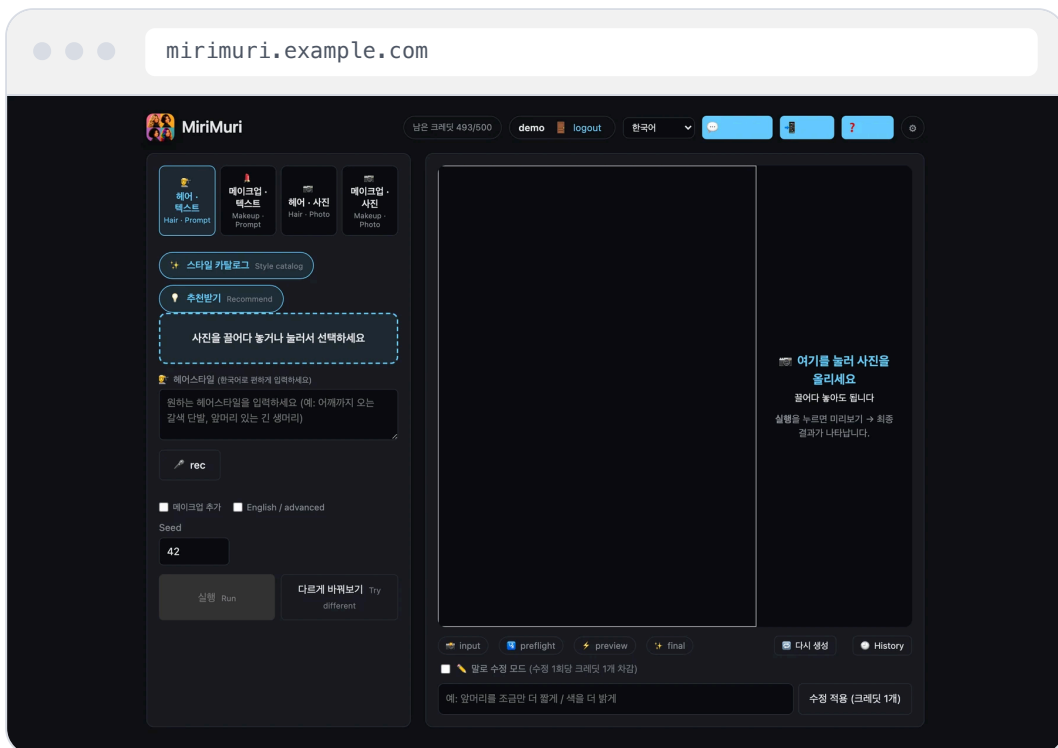

1. Enter your ID and password, and accept the terms.
2. Signing in opens the home screen.
3. Pick what to change - hair or makeup.
4. Add your photo.
5. Or browse the style catalog instead of typing.
6. Not sure what suits you? Tap Recommend.
7. Describe the hair you want, in your own words.
8. Press Run to start.
9. The preview arrives in seconds.
10. The full-resolution result fades in.
11. Not quite it? 'Try different' gives another take.
12. Hide your face before sending it to a salon.
13. Every result is saved to History.
14. Results - same face, only the hair changes

1 Enter your ID and password, and accept the terms.

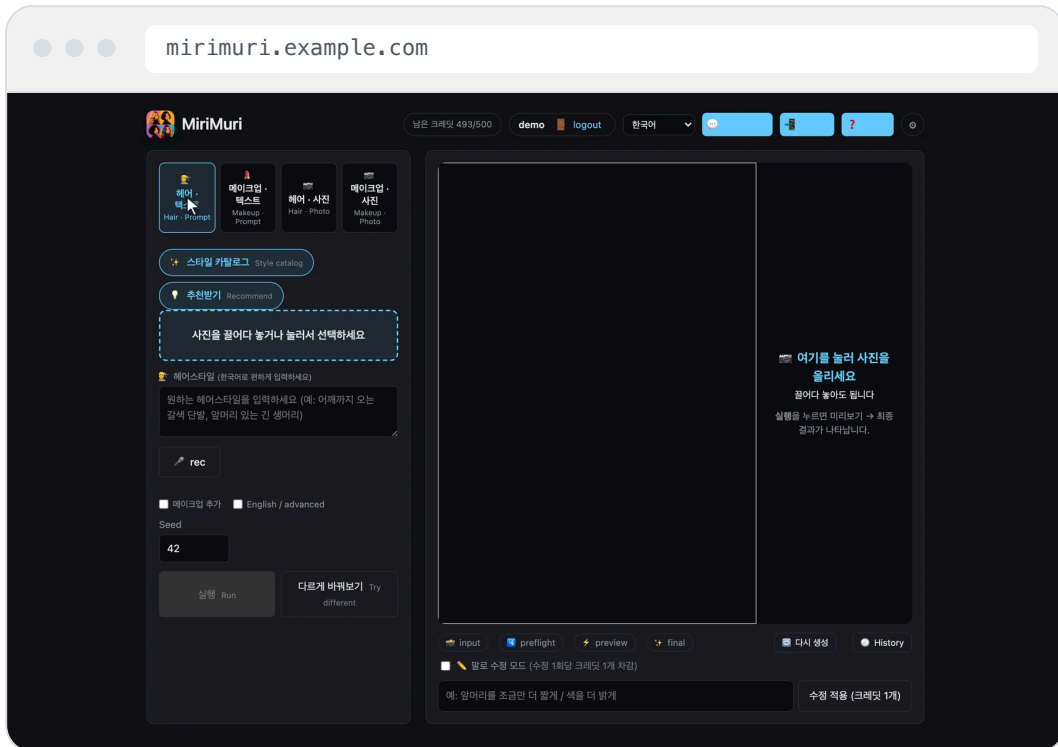

Agreeing to the terms is required. The browser remembers the session afterwards, so this is not a per-visit step.

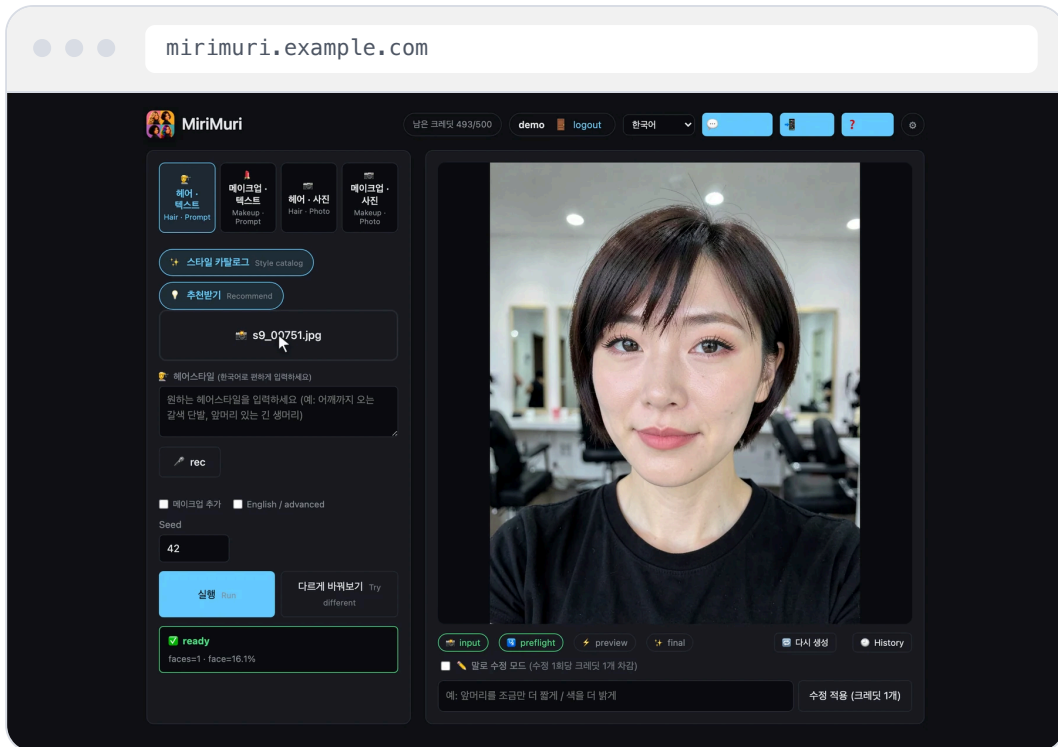

2 Signing in opens the home screen.

Controls on the left, results on the right. Working top to bottom down the left column is the whole job.

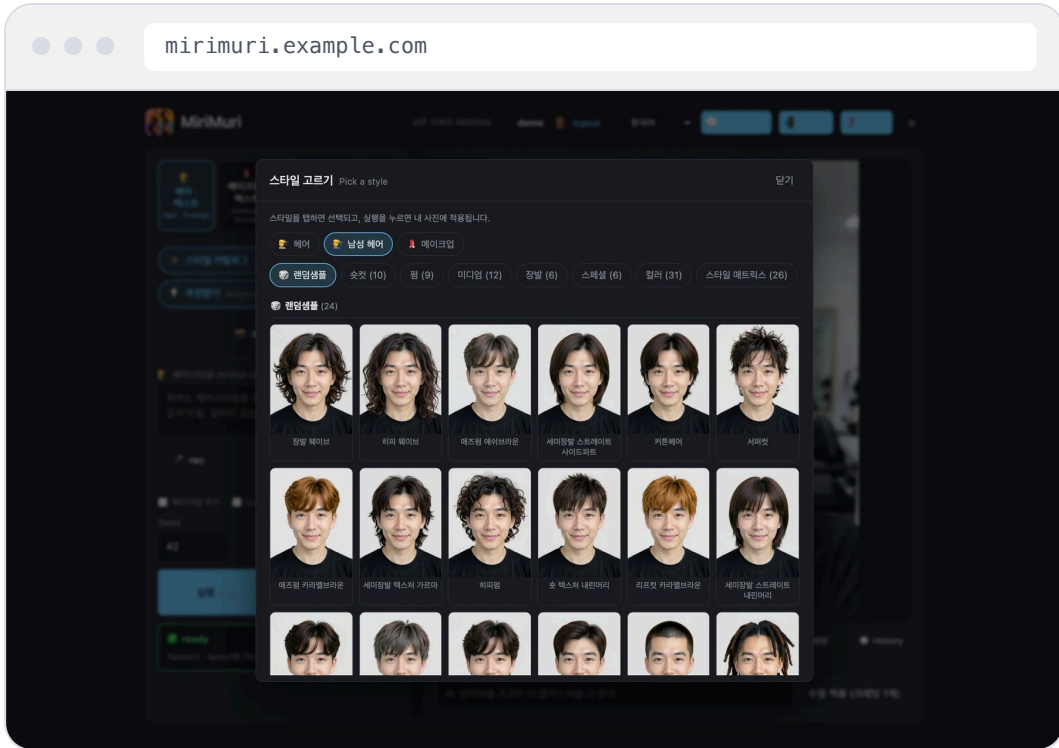

Four modes. The **text** modes let you describe what you want in words; the **photo** modes take a reference picture and carry that style over. This walkthrough uses hair-by-text.

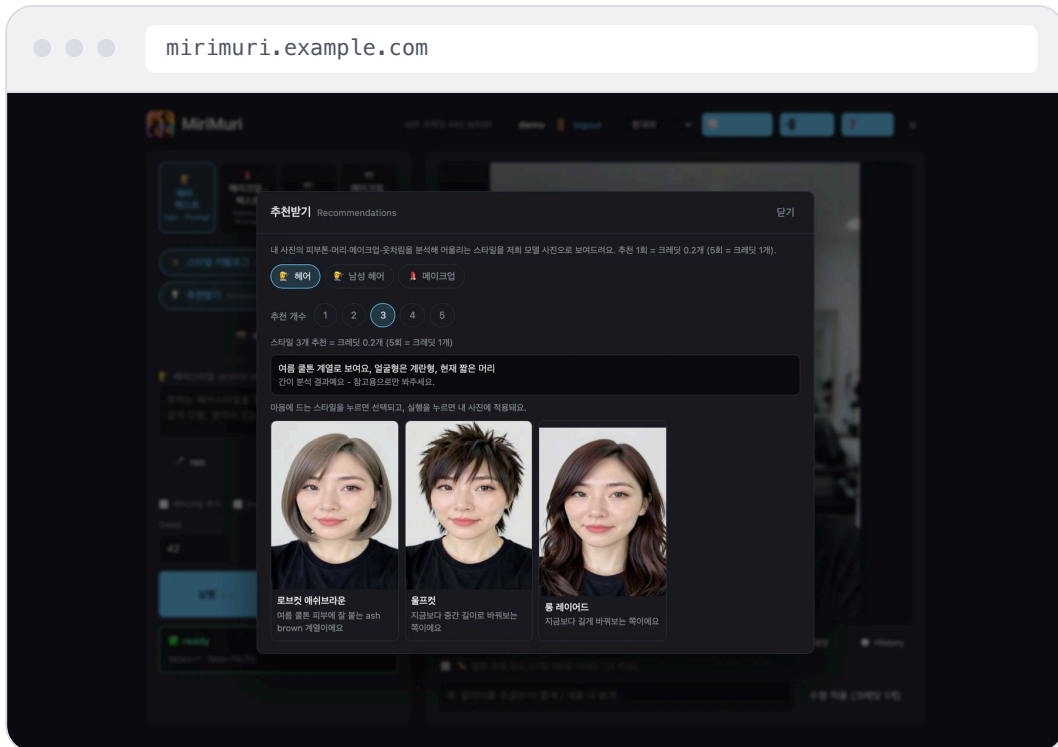

Tap the photo box to choose a file, or drag one in. A check runs immediately to confirm the face is usable - if it is too small or obscured you are told here, not after a render has already run.

Or browse the style catalog instead of typing.

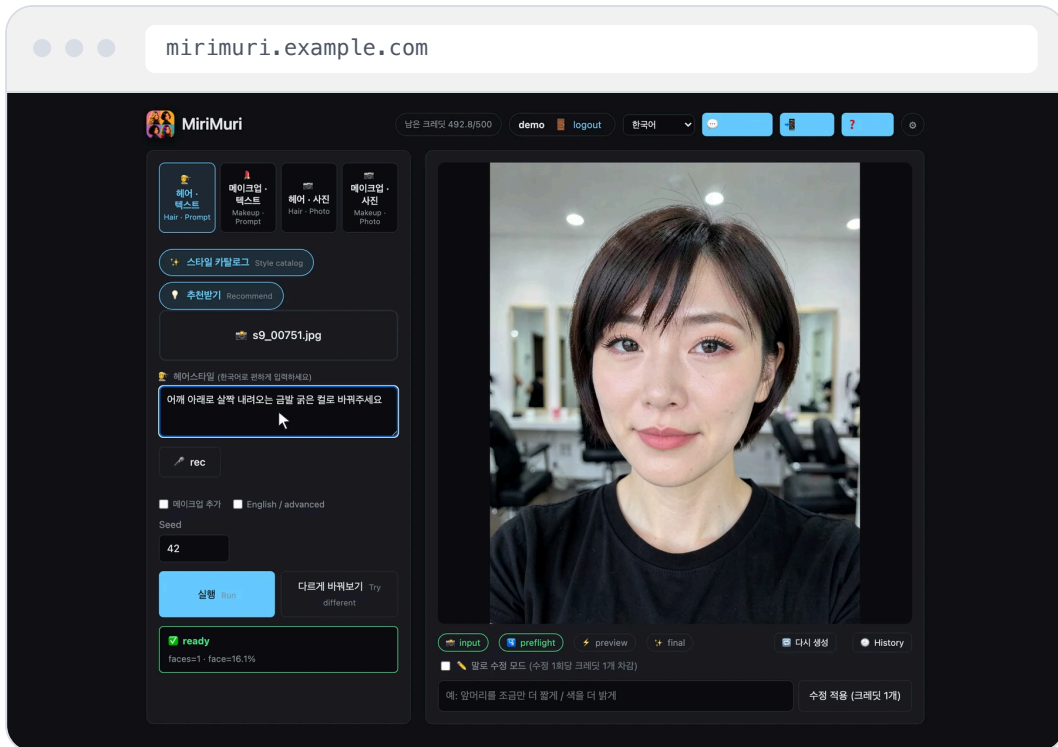

The 🌟 **Style catalog** button opens 500+ rendered styles - tabs for women's hair, men's hair and makeup, organized into themed sections (bob, long, perm...) you scroll through in one list; tapping a photo selects that style. Anything you type still takes priority.

💡 **Recommend** quickly analyzes your photo - skin tone, hair length and colour, makeup, even your top - and picks styles that suit you. Each pick is shown on our model with a one-line reason why. One run = 1 credit. Tap a card you like and that style is selected, ready to apply with one press of Run.

7

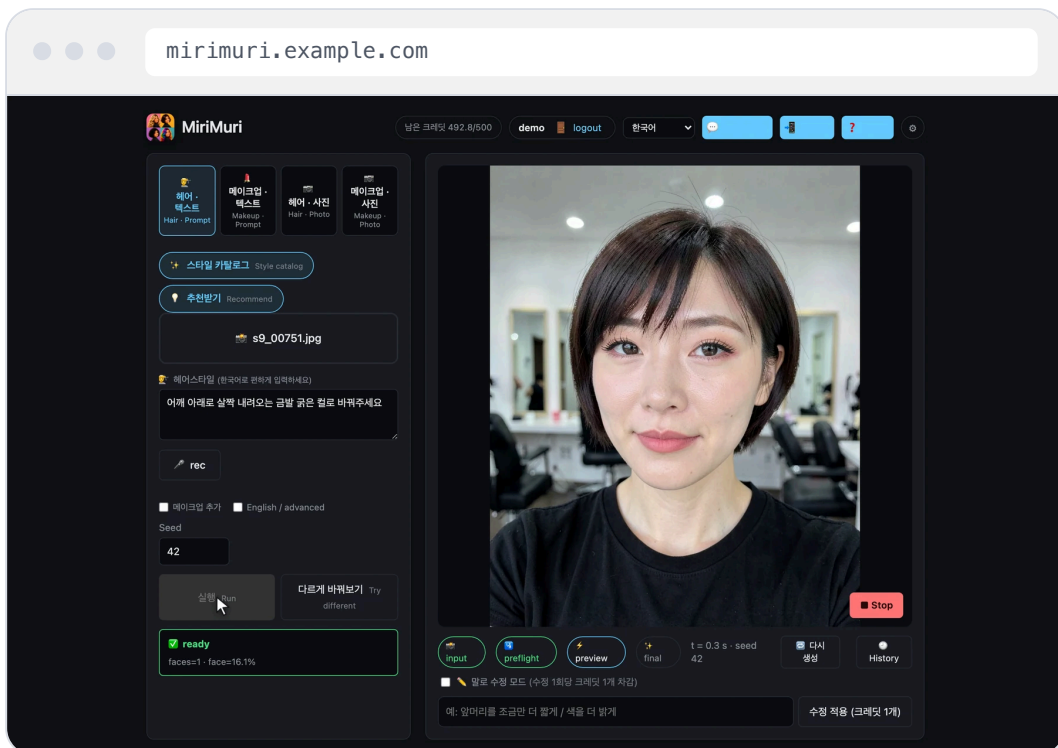

Describe the hair you want, in your own words.

No salon vocabulary needed - plain language works. Korean is the default input and is translated automatically; tick **English / advanced** to write English directly.

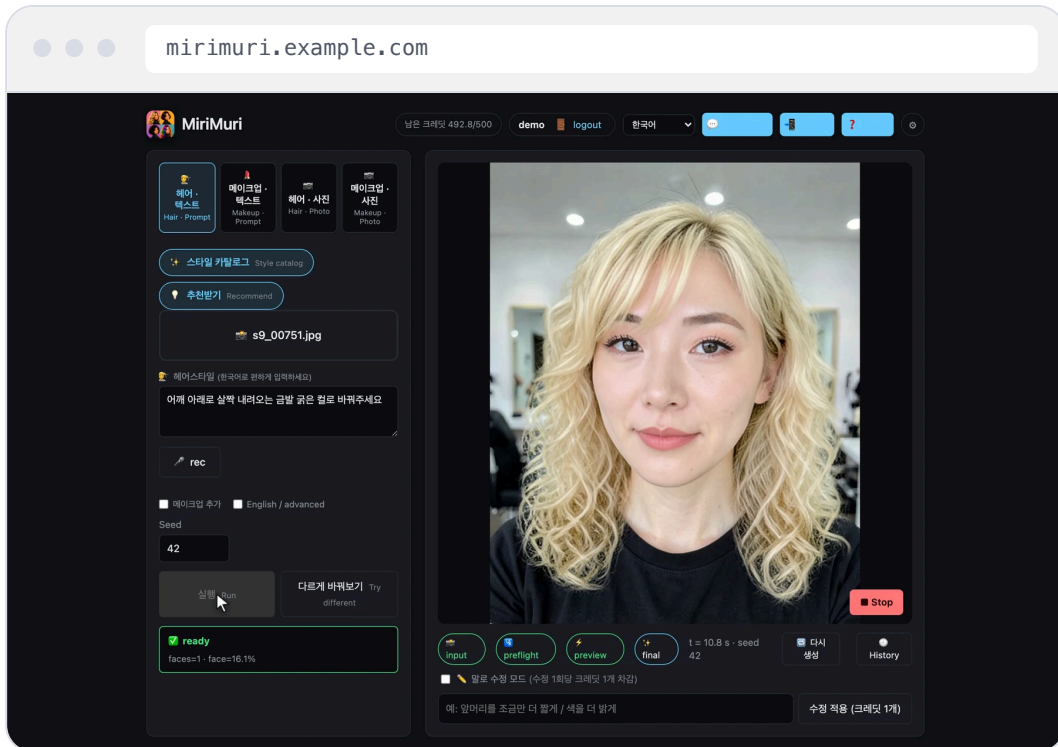

8

Press Run to start.

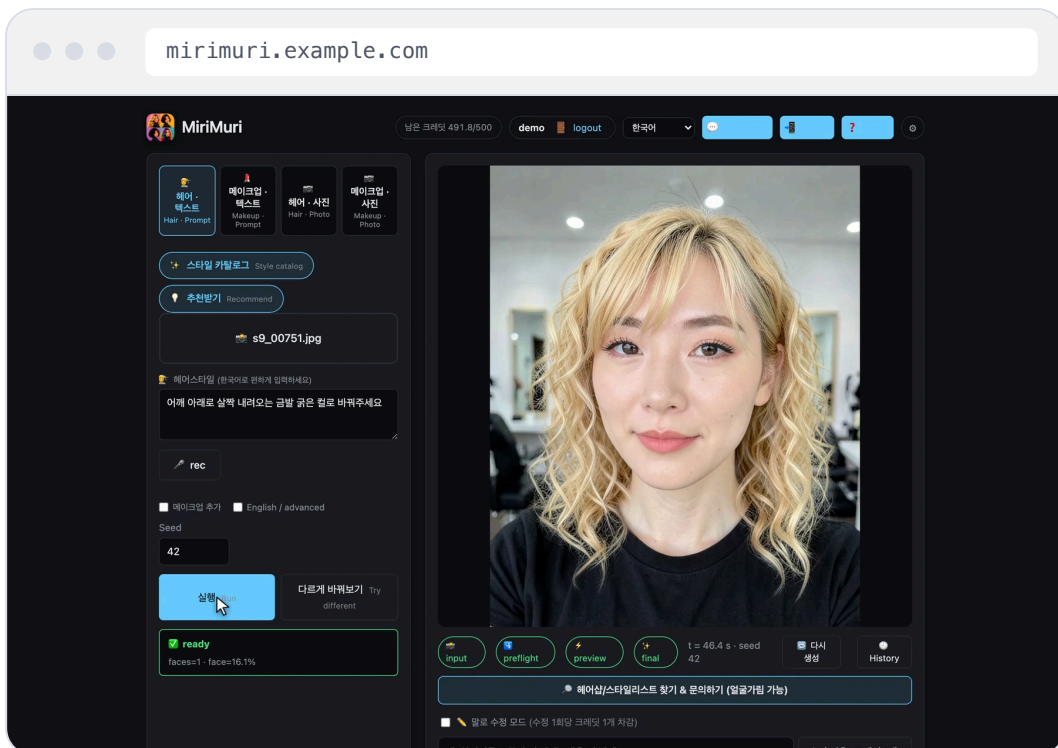

The stage pills light up in order: input, preflight, preview, final. A fast preview lands first and the high-resolution final cross-fades in over it.

9 The preview arrives in seconds.

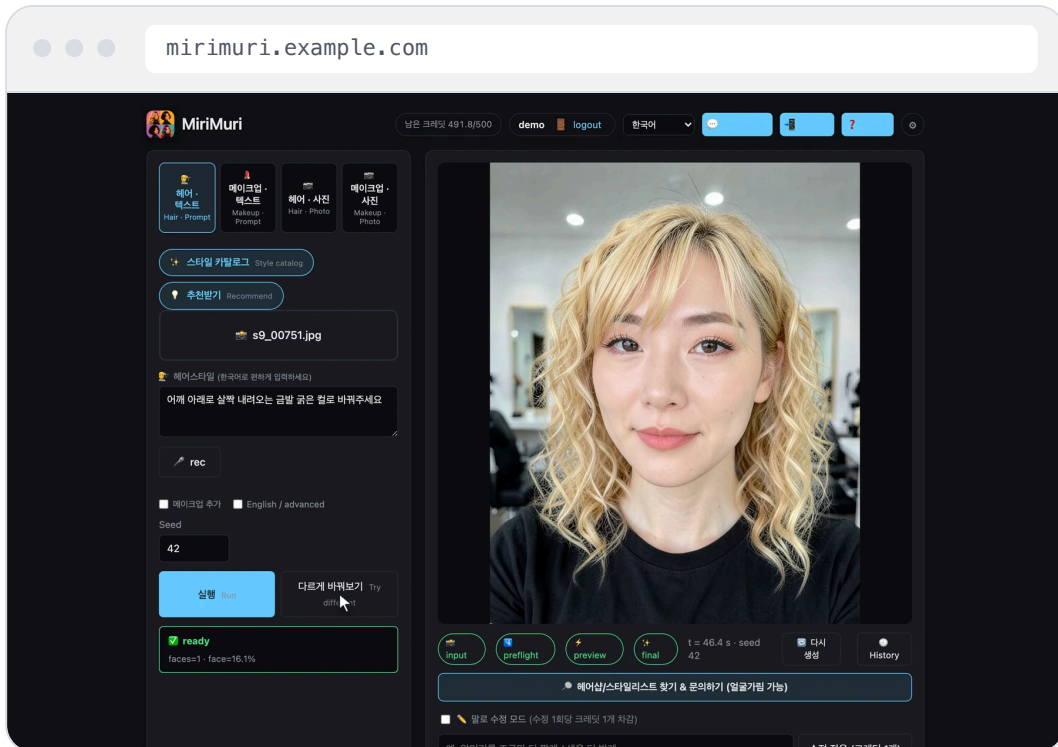

The preview is computed at low resolution, so it is much faster. If the direction is wrong, fix the sentence and re-run - no need to wait out the final.

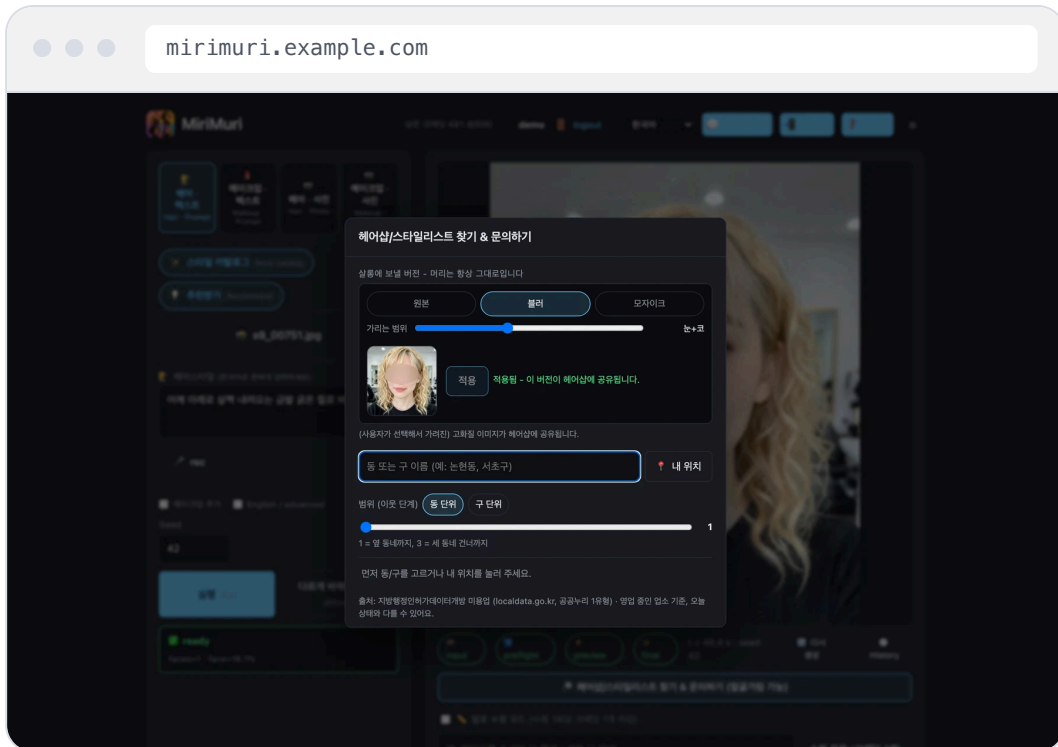

10 The full-resolution result fades in.

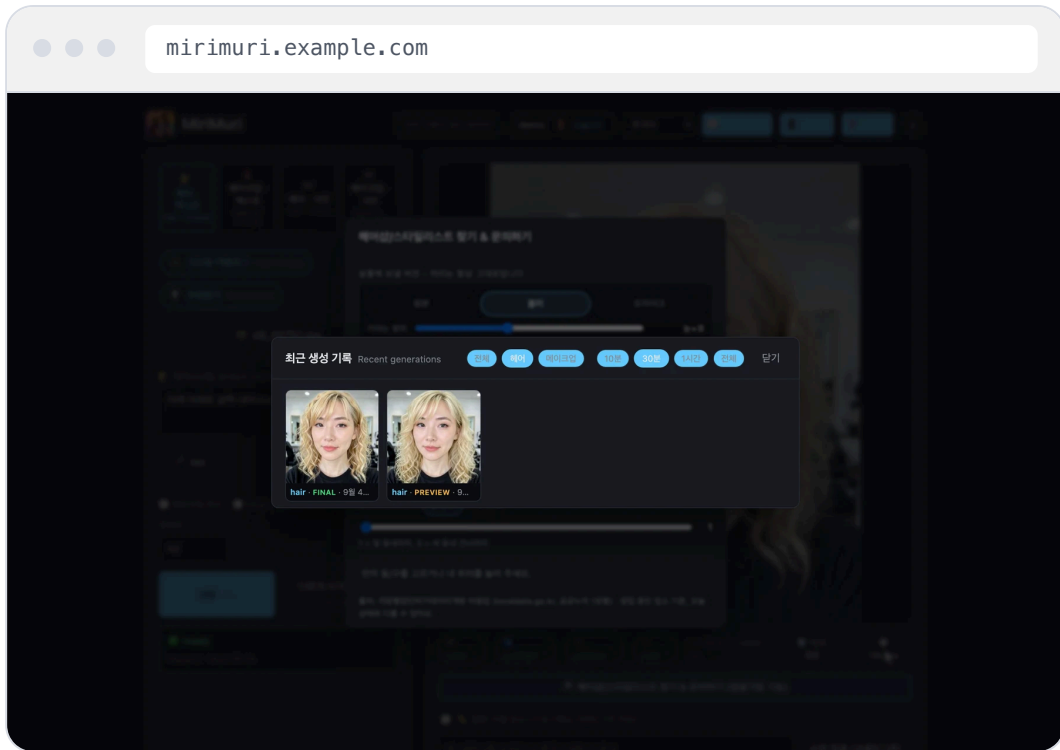

The final result cross-fades over the preview. Note what did **not** change: the face, the skin tone, the clothes and the background are the original pixels.

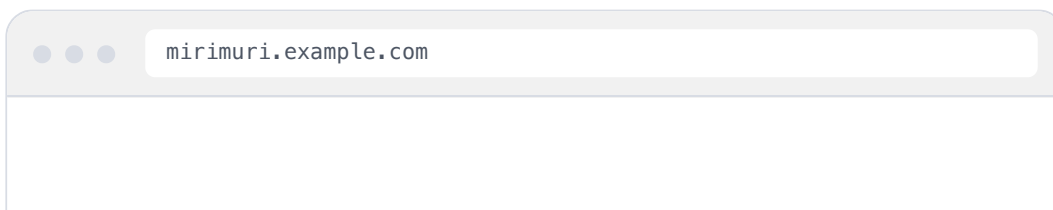

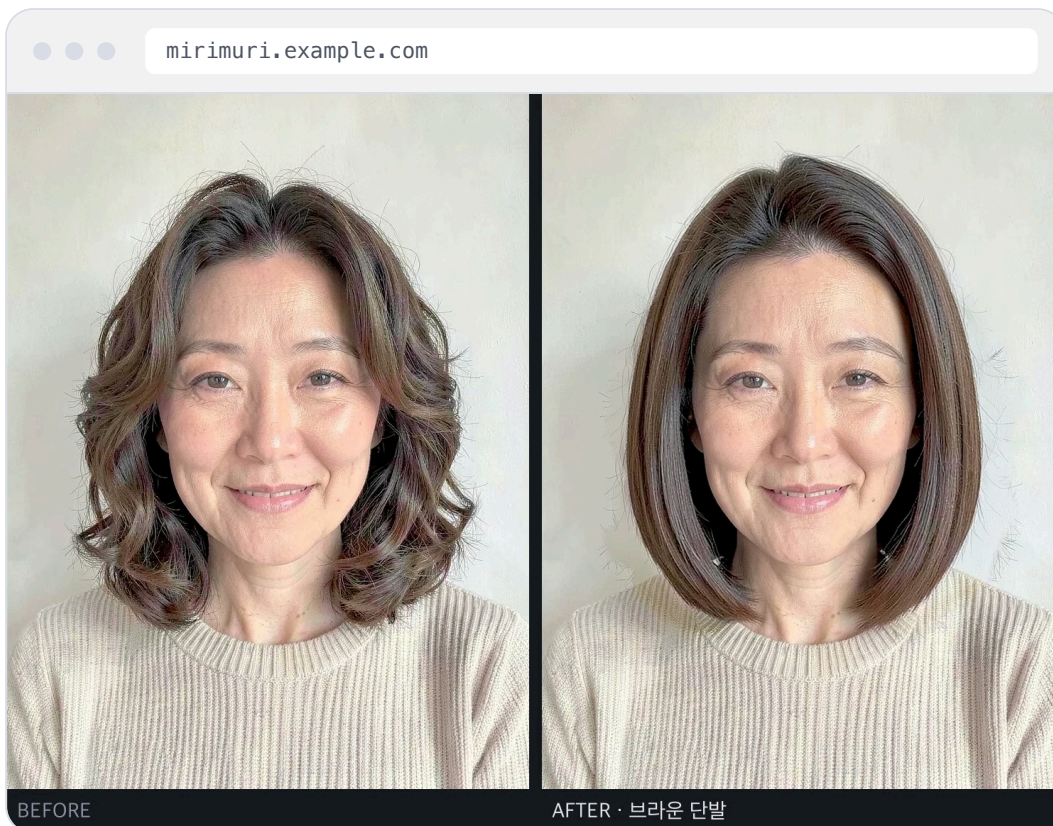

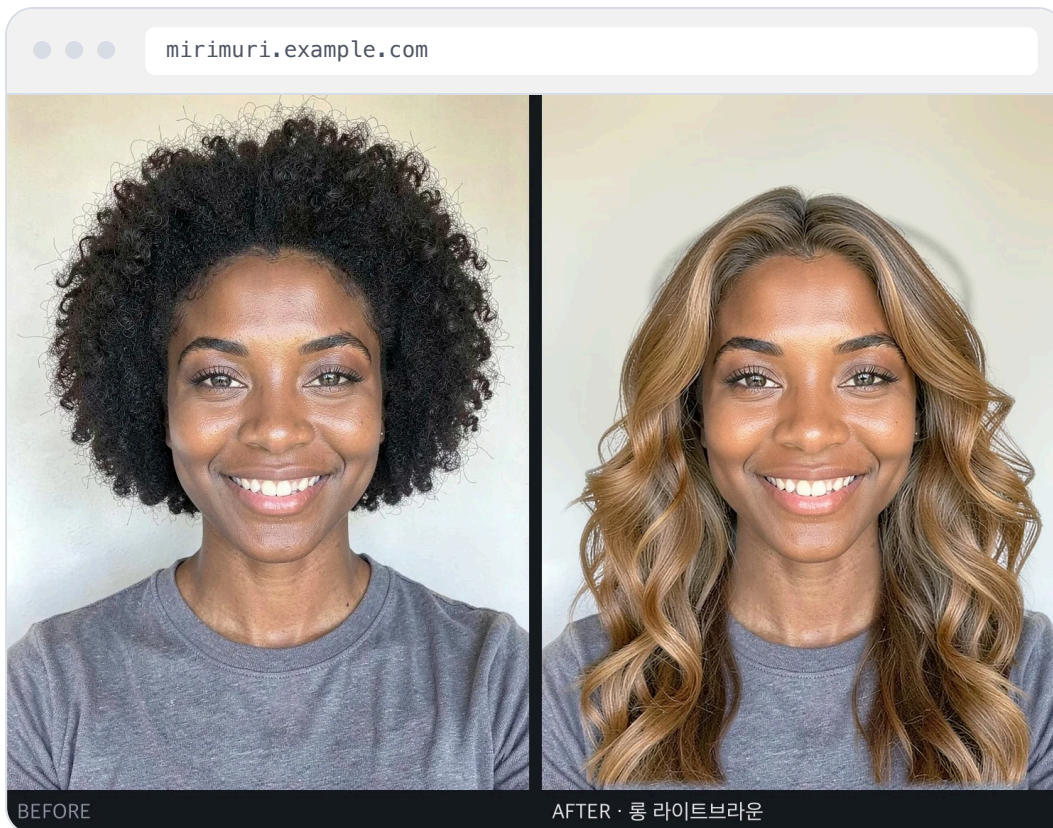

Same instruction, different variation. This is the 'right idea, show me another' button - no rewriting required.

You do not have to send your face to get a quote. Open **Find & contact a salon / stylist**, tap **Hide my face for sharing** and pick the method (original / blur / mosaic) and how much is covered - and the hair stays fully visible either way. It is computed once, so switching after that is instant.

Results are kept without you saving anything. When you are showing a stylist, the time filter (10 min / 30 min / 1 hour / all) narrows the view to what you just made, so scrolling never exposes older photos.
